Congratulations on the purchase of your Steri Stand™!

You will find the following components in the box for each Steri Stand™:

- Triangular Base Plate
- Upright Column
- Foot Pedal
- Hooked Connecting Rod
- Universal U-Clamp
- Bottle Plunger Lever
- 1 x M8 Bolt, Nut and Washer
- 1 x M5 Countersunk Screw & nut
- 2 x Locking Pins
- 1 x M8/M5 Wrench
- 1 x M8 Nut Jig
Assembly Time: 5 minutes

STEP 1-3  ATTACHING COLUMN TO BASE

1. Insert the M8 bolt from the bottom of the base plate (feet down) through the round end of the key hole.

2. Secure the upright column over the M8 bolt ensuring the square tab at the bottom of the column fits into the square part of the keyhole opening on the base plate. Add the M8 washer and then the nut over the bolt and hand tighten.

3. Slip the M8 Nut Jig over the top of the M8 Nut, and using the supplied wrench, tighten the M8 bolt ensuring it will not become loose.
Step 4. Installing Plunger.

Place the Steri Stand upright and slide the bottle plunger through the top right slot on the front as well as through the corresponding slot on the back of the column (the face plate should be facing you), making sure the notch in the plunger lever is facing to the top. Secure the plunger with a locking pin in place once it is slid all the way through the back of the column.
Step 5.

Drop the Hooked Connecting Rod in from the top of the column between the Bottle lever plunger and the right side of the column, ensuring the hooked end rests in the notch of the bottle plunger lever.
Step 6.

Slide the foot pedal through the bottom left slot of the upright column (Face plate facing you), making sure the notch in the plunger lever is facing to the bottom. Ensure the foot pedal slides through the bottom hook of the hooked connecting rod, moving the bottom hook over and into the notch. Secure the foot pedal with a locking pin in place once it is slid all the way through the back of the column.
Step 7

Install the U-Clamp on the longest slot on the front of the column. Make sure the tab on the U-Clamp is down once in the slot. The M5 screw goes into the hole on the U-Clamp and is secured by the Wing-nut from inside the column.
Step 8

Finally, once the bottle is in place, pull the bottle all the way up until the top of the bottle pump connects with the bottom of the Plunger Lever. Keep pulling upwards on the bottle pump until the Plunger Lever cannot move further in an upwards direction (Do NOT pull up on the U-Clamp, as that will compress the bottle pump and will result in an incorrect installment). While keeping the bottle pump lifted against the Plunger lever, tighten the Wing-nut on the inside of the upright column to ensure that the U-Clamp cannot move. The bottle will now be correctly set for its specific pump height, and the Steri Stand can now be used!
